

UCLH Cancer Collaborative

**(part of the National Cancer Vanguard with
RM Partners, and Greater Manchester Cancer)**

We want to be able to say that our patients are diagnosed faster, have a better chance of survival, a better experience of care and are better informed and supported

Our Approach

- **Collaboration and system leadership:** The *UCLH Cancer Collaborative* aims to take a step change approach to shared workforce, capacity, capability and financial understanding across the sector to drive best practice, efficiencies and improved patient experience
- **London Cancer:** *London Cancer* continues within the Vanguard structure at UCLH as an enabler of partnership working and to ensure sustainability of projects already underway in all four pillars
- **Primary care providers, commissioners and public health:** working in partnership to deliver sustainable local transformation across whole pathways
- **Patient involvement and empowerment:** Patients help set priorities and design new services from the start; are better informed about outcomes that matter to patients; and are supported in the community

What will we do? – four pillars

Earlier Diagnosis

Centre for Cancer Outcomes

London Cancer Pathway Boards /ERGs

New Models of Care

Supported by three enablers

- **System architecture**
- **Workforce**
- **IT and Information Governance**

System Architecture

- **we will work with commissioners and providers to understand costs and value of whole pathways,**
- **devise tariffs for things like stratified follow-up,**
- **and consider a contractual form to define the collaboration to support the four pillars.**

Workforce

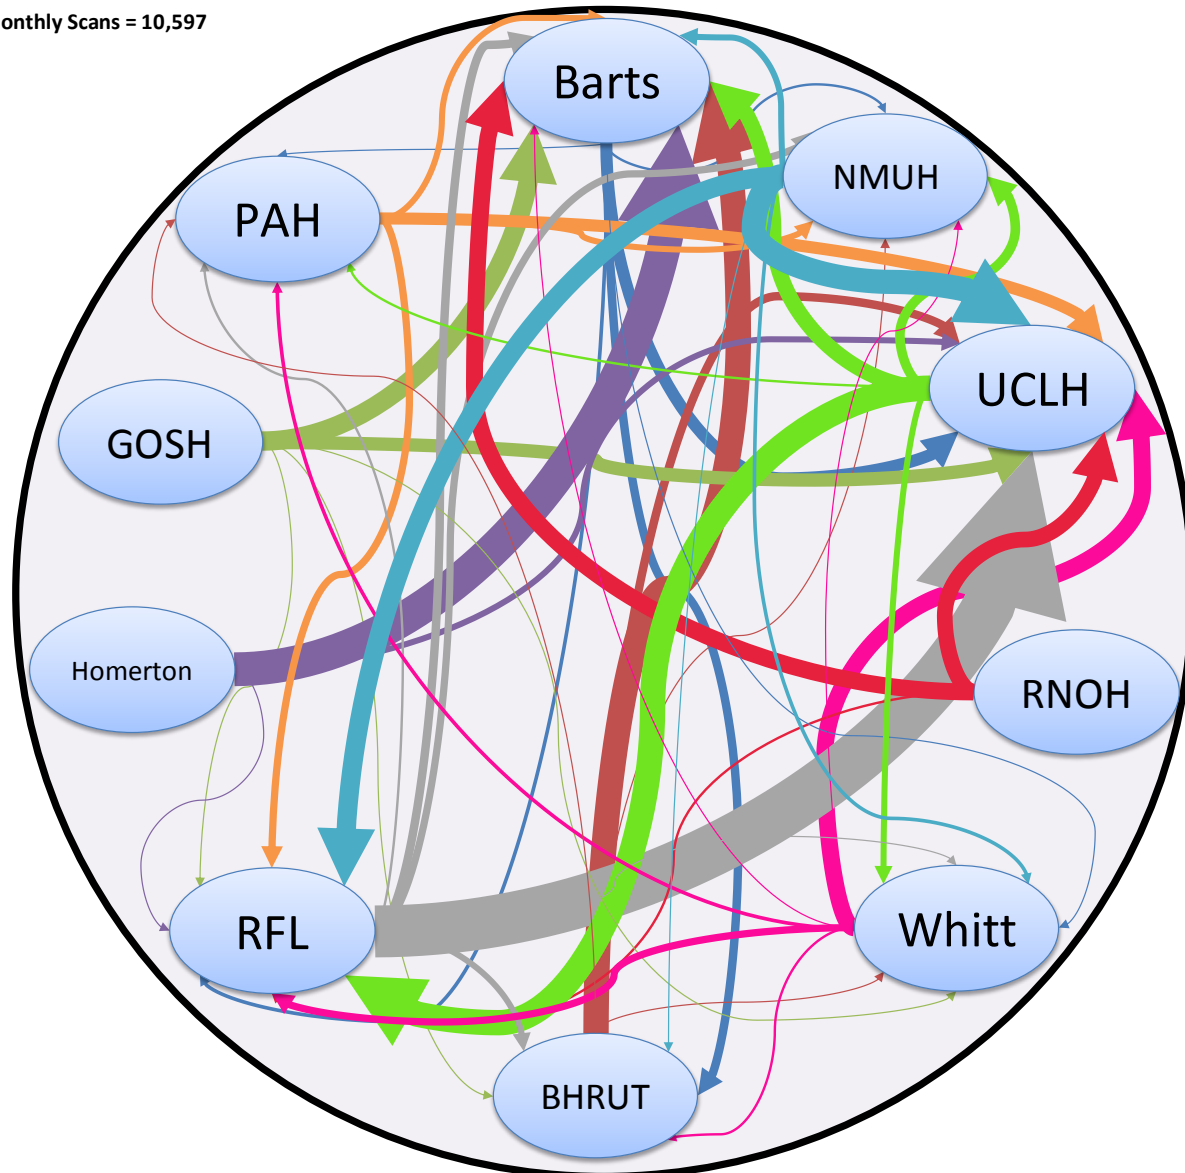

- **we will seek a new contractual solution to shared workforce, starting with an indemnity agreement to phase out honorary contracts,**
- **we aim to improve joint working, increase resilience, reduce duplication, aim for more common systems we can all use**
- **eventually we see a world where there is a single contract that could apply to any organisation in our sector**

IT and IG

- **Three problems:**
 - **a) clinical information available at the point of care throughout the sector across all pathways**
 - **b) tracking patients between organisations**
 - **c) simplifying data entry and analysis**

The scale... IEP Transfers within North Central and East London Sector

Monthly Scans = 10,597

So what will we do...

- **we will draft a single information sharing agreement based on implied consent that will, in turn, enable a future state of information being ‘pulled’ not ‘pushed’**
- **We are conducting an options appraisal with all the trusts to see what the best IT solutions could be for the three problems**
