Teenage Cancer Trust Lead Nurse Teenage & Young Adults

- Individual specialist support for TYA patients, staff and families

- Service development - current projects

- Work with designated hospitals to improve TYA care

- Work at local and national level on development of services and TYA care
Introduction

- Advanced Nurse Practitioner Role - background and development
- Why look at new ways of working?
- What does this mean in TYA?
- Patient & staff experience of TYA ANP
- Current evaluation of role at RMH
Advanced Nurse Practitioner Roles

• Introduction of ANP roles at RMH

• Impact evaluated

• Patient experience

• Multidisciplinary team working

• Patient outcomes

• Patient safety
Why look at new ways of working?

- Pressures on National Health Service
- Funding vs need - pressure to be financially efficient
- Reduction in junior doctors working hours, changes in medical education
- Change in nursing education

Pressures on services can present opportunity
What is an Advanced Nurse Practitioner?

- Highly experienced & educated members of the MDT
- Clinical skills - independently assess, triage, diagnose, treat, refer, prescribe
- Education, research and management
- Safe and consistent care
- Work across boundaries
- Local, regional and national level services improvement
What does this mean in TYA?

- Multiple teams, ward rounds - autonomous daily management of TYA patients
- Communication
- Flexibility in working in age-appropriate environment
- Daycare and inpatient
- Large geographical area
- Recognition of the role
Objectives of the role

1. Coordinate care - inpatient/ outpatient/ shared care

2. Consistency

3. Timely patient care i.e. discharge times, chemotherapy times, LOS

4. Establish a model of care with the MDTs admitting patients to TCTU and daycare

5. Started focusing on haematology and paediatrics, to expand to urology and other teams
Challenges

- Steep learning curve - learning paediatric or adult

- Defining the role - new role nationally

- Working across multiple teams/ acceptance by medical teams eg when making referrals - varies by hospital

- Balance holistic care with advanced clinical skills

- Autonomous role/ can be isolating - not attached to one medical team

- Challenge of balancing service development/ teaching with clinical need on ward
Current evaluation of role at RMH

- Introduced at RMH approximately 18 months ago
- Few Advanced Nurse Practitioner roles nationally working specifically within with teenage and young adult cancer patients
- Impact of this role currently being evaluated
Professional Benefits

- New skills
- Autonomy
- Job satisfaction
- Getting to know a broad cross-section of hospital staff
- Positive impact on patients, team and families
